

BAMBRELLA PRODUCTS - CARE AND MAINTENANCE

Alize range

Bambrella® Bamboo Parts

As a general rule, Bambrella® products need very little maintenance, the maintenance of bamboo is similar to teak wood. Where the bamboo of the Alize are in direct sunlight for example the posts and sidebeams in time they will eventually fade to a grey colour if oil is not reapplied. If you do not have Bambrella®oil, the oil you use must be a synthetic penetrating decking oil. Before oil is applied wash the bamboo with warm soapy water using a sponge or soft brush. Allow to dry. Using a cloth, wipe a thin coat of oil onto the bamboo, do not apply a thick coat as it will take a long time to dry. Dry off any excess oil with a dry cloth. Oiling will bring back the colour and lustre. If you want to oil the canopy frame you will need to remove the cover first, see instructions on how to remove a cover.

The whole Pavillion of the Bambrella® Alize should also be washed down periodically using warm soapy water to remove any dirt or other substances that mildew can form on and then rinsed off with clean water removing any residue.

As on most surfaces left outdoors mildew may form on the surface of the bamboo. If you see the first signs of mildew clean it off using Bambrella® cleaner or a household mould and mildew cleaner. This will kill the mildew and stop it from spreading. Mildew can spread quite quickly if left, especially in tropical, humid and damp conditions. If the mildew is left it can stain the bamboo. If this happens and the Bambrella® cleaner or the household mildew cleaner does not get rid of the stain you can use a Bleach based cleaner and a pot scourer or Scotch-Brite to remove the staining. After cleaning, always rinse off thoroughly with clean water.

Bambrella® – Maintenance of Stainless steel parts

The stainless steel parts are high grade 304 and the only maintenance needed is to be washed down periodically with warm soapy water to remove any corrosive deposits from the surrounding environment.

In the rare occurrence of a stain/rust appearing on the stainless steel parts use a Bambrella® clean off stainless steel cleaner, if you are unable to purchase a **Bambrella® stainless steel care kit**, we recommend the following;

Clean the stain using a Non-abrasive stainless steel cleaner/polish. Test a small area first and carefully follow the Manufacturer's instructions.

Rub with the grain of the metal, NOT in a circular motion to ensure that the original finish is not damaged. Rinse with clean water and dry thoroughly to avoid streaks, rubbing with the grain, not against.

If required you can use a Non-scratch pot scourer to rub over the stainless steel. Again rub with the grain, NOT in a circular motion. Rinse with water and dry thoroughly.

Rinsing well with water and drying with care will ensure that the cleaned stainless steel is then back to its original form, corrosion free.

Seaside/Pool areas:

Bambrella® products that are used in these locations, may require cleaning more often due to potential chloride deposits that can create both corrosion and etching.

Powder coated parts – Alize

These parts are E-coated and then double powder coated for extra protection. The powder coated parts of the Alize include the 4 x metal feet brackets and the brackets which hold the canopy to the frame. Like the other parts of the parasol, wash down periodically with warm soapy water using a sponge or soft brush. You can use a car wax or protectant to maintain or restore the lustre of the powder coated finish. In seaside and areas next to swimming pools you should wash down the parts more frequently to remove the build-up of chloride salt deposits which are corrosive.

Bambrella® Alize Canopies and Curtains

The Life of your Alize canopy can be increased by occasional maintenance. Fabric life can be extended by simply washing down the cover with warm soapy water using a sponge or soft brush, to remove any dirt or other substances on which mildew may form, when required. Spuncrylic curtains and canopy are machine washable on a cold wash and can be washed up to six times without affecting the Teflon specialist coating. Do NOT tumble dry, air dry instead.

We hope you get many years of trouble free enjoyment from our products.

Many thanks, Mr R Bottomley. (Managing Director, Bambrella® Ltd)
